SCHOOL

TODAY'S STUDENTS TOMORROW'S INNOVATORS

Sugata Mitra & Mark Osborne

In an ever-changing world, how can
we future-proof our students to
become 21st Century thinkers and
Self-directed Learners?

Sugata Mitra

Is a world-renowned physics professor whose research has led to the creation of a global network of Self Organised Learning Environments (SOLEs) and a 'School in the Cloud'. Sugata rose to prominence in the academic sector with his 'Hole in the Wall' experiment, which began in India and spread across the globe. As the keynote speaker for this event, Sugata will focus on how technology enables us to think and learn in a more meaningful way, and he will offer thought-provoking insights into what motivates learners to be self-directed.

Mark Osborne

Is an expert in leading change management in schools, with a special focus on innovative learning environments. Mark will explicitly unpack the reasons why we need to be cultivating our learners in environments like our very own Learning Centres, and using the learning styles that accompany these dynamic physical spaces.

This exciting professional learning event, hosted by Woodthorpe School, brings together two highly regarded and future-focussed speakers to offer their insight into the rapidly changing learning environment of our students.

They will highlight:

- the importance of acquiring lifelong learning skills while at school
- intelligent solutions to future-proofing our students for jobs and careers that don't yet exist.
