

Parents, caregivers, directors, teachers, educators, and other staff
are invited to participate in the

Digital Connections: Communication across home and non-compulsory early education settings study

(QUT Ethical clearance number: 5799)

Home-education communication is foundational for children's positive educational experiences in the early years.

The project

Communication approaches have changed since the days of taking notes home from school. This study is interested in the many ways that parents, caregivers, and educators share information. We will explore how parents, caregivers and educators work together to connect and promote children's positive educational experiences. A key focus of the study is to understand how relationships are built through digital and non-digital modes of communication.

The aim

The aim of the project is to understand how communication happens, who communicates, the frequency of communication, when and where different communication modes are utilised, and the reasons for communication.

Who's invited

Parents, caregivers, centre directors, teachers, educators, and other staff of non-compulsory early education settings are invited to complete a survey about digital communication practices.

How to participate

To find out more about the study and to complete the survey please follow the link or scan the QR code. The survey will take approximately 20 minutes to complete.
